

Population for Storm Water Entities as Defined by the 2000 Census

Oklahoma

This document contains calculations for populations within an Urbanized Areas (UA) as designated by the US Census Bureau for the state of Oklahoma. Population is calculated for each portion of either an incorporated place or a county within an UA and is based on the population values provided by the 2000 US Census Tiger data. In addition, a table is included that provides a list of places that have a population greater than 10,000 people and a population density of 1,000 people per square mile that are not located in an UA. This data was obtained from the US Census website.

* The population calculation for this area provides the population within the UA that is not located within an incorporated place. An incorporated place is created to provide governmental functions for a concentration of people. For example, a city or municipality is an example of an incorporated place.

** Some incorporated places appear twice since they are located within multiple counties. To calculate the total population within the incorporated place add all values associated with it together. For example, the population of Catoosa is 3,793 + 1,541 = 4,334.

*** The portion of Cleveland County in the Norman UA is part of a University campus meaning the area does not have a permanent population

Outside Urbanized Area Populations
